The invention relates to a peptide conjugate having the formula: (R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X = O or NH, when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COC or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the BH3 domain of human BAK. The invention relates to a bcl homoLogy domain 3 (BH3 domain), derived from a proapoptotic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conductions, archritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; colorectal; colorectal; colorectal; non-small lung; renal; thyroid; neuroblastoma; lymphocytic leukemia; neurodegenerative disorder; AIDS;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC alkyl group, or benzyl. The peptides ABB37001-B37058 represent examples CC alkyl group, or benzyl. The peptides ABB37001-B37058 represent examples CC of the peptide portion of the conjugate. The peptides represent analogues CC of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of CC the BH3 domain of the cell death agonist Bad. The peptide conjugate is CC useful for modulating apoptosis in the cells of a subject, or for CC reversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of CC apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 CC function. In particular, the peptide conjugate is useful for treating a CC subject afflicted with a cancer characterized by cancer cells that CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC non-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or CC conjugate is also useful for treating disorders characterized by cCC increased apoptosis, e.g. neurodegenerative disorders, acquired cCC immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                       The present sequence was used in an example illustrating an invention relating to an antinycin derivative which modulates apoptosis by binding to a Bol-2 family protein and preferentially induces apoptosis in a cell which over-expresses the Bcl-2 family protein. The antimycin derivative is used in treating an apoptosis rassociated disease and for inducing apoptosis. It is also useful for treating neoplasia and drug resistance. The present sequence binds to the hydrophobic pocket of Bcl-2. A competitive binding assay was used to determine if the site of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bak BH3 peptide.

CC (R-X)n peptide where n = 1-10; x = C=O, when the R-X group is attached CC (R-X)n peptide where n = 1-10; x = C=O, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where CC the functional group of the side chain is NH2 or OH; or X = O OR NH. CC when the R-X group is attached to the C-terminus of the peptide, or a CC side chain of the peptide, where the side chain functional group is CCOH CC or CONH3; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one CC or two double bonds, cyclobutyl organized containing one CC or consubstituted with a 1-5C straight or branched chain alkyl group, CC phenyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides AAB37001-B37058 represent analogues CC of the peptide portion of the conjugate. The peptides represent analogues CC of a Ball group, polypeptide conjugate. The peptide conjugate is CC useful for modulating appropriosis in the cells of a subject, or for CC useful for modulating appropriosis in the cells of a subject, or for CC useful for modulating appropriosis in the cells of a subject, or for CC apoptosis in cancer cells, It is also useful for inhibiting Bcl-2 cC subject affilicted with a cancer characterized by cancer cells that CC express Bcl-2. The cancer includes prostate, colorectal, gastric, cc. con-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or CC acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                      The present sequence is the mammalian Bak Bc1-2 homology domain 3 (BH3) domain, which was used in a sequence alignment with the same domain of a putative version of the mammalian apoptosis regulator BBC3, which was designated BBC3-ORF2. The BBC3 protein, nucleic acids and antibodies are suitable for use in promoting cell death or for preventing apoptosis in malignant cells and those causing autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               conjugate is also useful for treating disorders characterized by increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                     Novel polynucleotide encoding a BBC3 protein which is useful for modulating apoptosis, especially in the treatment of cancer and autoimmune diseases \cdot

```
The invention relates to a peptide conjugate having the formula:

(C (R-X)n-peptide where n = 1-10; x < C=0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where the Intervious group of the side chain of the peptide, or x < 0 or NH, CC when the R-X group is attached to the C-terminus of the peptide, or x < 0 or NH, CC when the R-X group is attached to the C-terminus of the peptide, or the peptide, where the side chain functional group is COOH CC or two double bonds, cyclobury, cyclopenty, cyclopenty, optionally containing one CC or two double bonds, cyclobury, cyclopenty,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; BG1-2 superfamily; BH3 domain; cell death agonist; BH3; apoptosis modulation; B cell lymphoma/Leukemia 2; cancer; prostate; colorectal; qastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; stroke; myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide conjugates for modulating apoptosis or for inhibiting ceil lymphoma/leukemia 2 (Bel-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 18; Page 17; 74pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2000-679325/66.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Huang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-APR-2000; 2000WO-US09352
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          W0200059526-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo

The present sequence represents a GD domain corresponding to amino acid residues 67-94 of Bak. An antibody raised against a GD domain may be used to screen a CDNA expression library for clones comprising cDNA inserts encoding immunocrossreactive proteins. Truncated GD domain peptides have been shown to maintain the protein binding and cell killing function exhibited by wild type Bak. These molecules may induce apoptosis in tumour cell. These peptides act independently of p53 status. Bak or GD domain mimetics that inhibit Bcl-2 may be selectively toxic to certain tumours, e.g. follicular lymphoma, which depend on high levels of Bcl-2 for their continued growth and survival. GD domain mimetics may also be used for combatting viral infections by causing apoptosis

A nucleotide sequence encoding Bak-delta2-TM was obtained from cDNA by PCR and cloned as an in-frame fusion to the GAL4-DNA binding domain in vector pAS2-1. The construct was used in a two-hybrid screen of human heart cDNA for the identification of clones encoding Bak binding proteins. The invention relates to a novel Bak binding protein (BBP, see AAW79537), the gene encoding B (see AAV61499), methods for detecting substances that alter the specific binding between Bak and BBP, as well as diagnostic and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Bak-binding protein and related nucleic acid, vectors, transformed cells and antibodies - are useful for modulation of apoptosis in cancer, neuro-degeneration etc., also peptide fragments of Bak that interact with the protein

                                                                                                                                                                                                                                                        Cdn-1; apoptosis modulator; adoptive immunotherapy; therapy; HIV; autoimmune disease; reperfusion injury; hepatitis, osteoporosis; shock; lymphoma; eczema.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis. Deletion of the N-terminal 70 amino acids of Cdn-1 improved this activity, suggesting that small, truncated Cdn-1 molecules may be
         New nucleic acid sequences encoding Cdn apoptosis modulators related vectors, transformed cells, proteins and antibodies, or diagnosis and treatment e.g. of HIV infection, reperfusion

                                                                                  Cdn-1 cDNA was isolated from a human heart cDNA library using a previously isolated clone as probe. Recombinant Cdn-1 was produced in Sf9 and human colon adenocarcionma HT29 cells. Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell
                                                                                                                                                                      New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injur
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis. Deletion of the N-terminal 59 amino acids of Cdn-1 only slightly decreased this activity, suggesting that small, truncated Cdn-1 molecules may be potent therapeutics.
                                                                                                                                                                                                                                                                                                                                                                                                                         Cdn-1; apoptosis modulator; adoptive immunotherapy; therapy; HIV;

Expression of Cdn-2 in mouse progenitor B-cell FL5.12 cells decreased IL-3-induced apoptosis. The Cdn-2 protein displayed 97% amino acid identity with Cdn-1 (AAR77876).

                                                                                                                    This Bak protein sequence represents a bcl-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or

                                                                                                                                                                                                                                                          This Bak-2 protein sequence represents a bol-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak-2 protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak-2 and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or diagonatic general.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of hits satisfying chosen parameters:

     pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                   Score
